The AT-UPS1000-LCD UPS has been equipped with a number of advanced technologies ensuring active monitoring of the power supply network.
The device is a power supply of the online type and provides advanced mode of operation in total separation from the external mains. Thanks to this, it completely isolates connected devices and performs in practice the function of preventive protection against phenomena accompanying dynamic changes in mains parameters. These power supplies generate current transferred from the battery, which is constantly charged.
The device works with power supply adapters having Active Power Factor Correction (APFC).
