

Code: MK-1.5/POD-G

SWIVEL BASE FOR TRUSS GUYED MASTS **MK-1.5/POD-G**

The MK-1.5/POD-G swivel base allows you to put up the mast with guy wires on the ground. The foot should be hammered into the ground with a sharp edge 4 cm deep. Due to the stabilization of the mast with the use of guy wires, the assembly of this base does not require anchoring, pouring the foundation or the use of ballast blocks.

The Cardan joint with 2 degrees of freedom allows the mast to tilt freely, thus protecting the base mounting elements from damage.

Attention! Before setting up the mast, make sure that the ground on which the mast base will be placed is level.

Material:	Aluminum + Steel galvanized
Main features:	The design allows you to put the mast to the level without colliding with the clamps of the foot
Support:	Truss Mast MK-1.5
Weight:	10.46 kg
Dimensions:	612 x 400 x 400 mm
Guarantee:	2 years
