OPTICAL TIME-DOMAIN REFLECTOMETER (OTDR) **ZS1000-A**

The ZS1000-A optical reflectometer is a device that allows you to determine the state of fiber optic connection. The device allows you to check the attenuation of fiber optic connections, and also in the case of damage to the fiber, the location of the place where the defect occurred.

Small dimensions combined with a convenient button layout and a large, easy-to-read screen make it easy to use the device.
