

User Manual

Code: RV-L11S-A
ROBOT VACUUM CLEANER WITH A MOP **RV-L11S-A** IMOU

Warning!

Please read the user manual included in this work as it contains important information related with safety of installation and use of the device.

Only persons who read the user manual may use the device.

The user manual must be kept because it may be required in the future. The device is to be used exclusively for purposes specified in this user manual.

The device must be unpacked prior to starting-up. After removing the packaging make sure the device is in working order.

If the product has defects, it should not be used until it is repaired.

The product is intended for use at home and commercial use and may not be used for other than intended use.

The manufacturer is not liable for damages resulting from not adhering to the rules contained in the user manual, therefore, we recommend to follow the aforementioned safety rules for operation and maintenance of the device. In this way you will ensure yourself safety and avoid causing damage to the device.

The manufacturer and the supplier are not liable for losses or damages arising out of the product, including financial or intangible losses, loss of profits, income, data, pleasure from use of the product or other products related with it - indirect, incidental or consequential loss or damage. The above provisions apply whether the loss or damage concerns:

1. Deterioration of quality or the lack of operation of the products or products related with it due to damage as well as the lack of access to the product when it is undergoing repair, which results in stoppage the loss of user's time or a break in business activity;
2. Improper results of operation of the product or products related with it;
3. It applies to losses and damages according to any legal category, including negligence and other losses, termination of a contract, expressed or implied guarantee and strict liability (even if the manufacturer or the supplier was notified about the possibility of occurrence of such damages).

Safety measures:

Particular attention at designing was directed to quality standards of the device where ensuring safety of operation is the most important factor.

The device must be secured against contact with caustic, staining and viscous fluids.

The device was designed in such a way that it restarts operation when power supply is restored after a break.

Attention! We recommend using protections to further protect the device from possible overvoltages in installations. Surge protectors are effective protection against accidental pass to the device voltages higher than the rated. Damages caused by pass the voltages higher than specified in manual, are not under warranty.

Turn off the device before transporting it.

Prior to connecting the device to a power source check whether the supplied voltage is consistent with rated voltage specified in the user manual.

Proper product disposal:

A marking of a crossed out waste bin indicates that the product may not be disposed together with other household waste in the entire EU. To avoid possible damage to the natural environment of health due to uncontrolled waste disposal, therefore, it should be handed over for recycling, propagating in this way sustainable use of natural resources.

To return a worn-out product, use a collection and disposal system of this type of equipment or contact a seller from whom it was purchased. He will then be recycled in an environmentally-friendly way.

The RV-L11S-A cleaning robot is an advanced, automatic device that helps keep your home tidy. The included docking station allows approximately 30 days of maintenance-free vacuuming before the need to replace the dust bag in the station (the floor mopping function may require more frequent refilling of water in the tank). With the help of the station, the robot charges the built-in battery and empties the dust container. The battery installed in the device lasts for about 2.5 hours of continuous operation. Before it is completely discharged, the robot drives back to the docking station, where the battery is charged. After charging, the device automatically resumes cleaning from where it left off.

The vacuum cleaner works simultaneously in many ways (vacuuming, sweeping, mopping), thanks to which the floor stays clean. The small size of the robot makes it easy to get under higher furniture. The device can overcome obstacles up to 2 cm high, which means that floor thresholds, thicker carpets or doormats are not a problem for it.

The "Carpet Boost" function, i.e. increasing the suction power of the vacuum cleaner while traveling over the carpet, allows you to get rid of both dust particles and more difficult impurities (e.g. hair or animal hair) from carpets and floor coverings. The robot also has the function of cleaning the floor (mopping) using the attached mop holder. 250 ml water tank and zone control of washing intensity allow you to keep all floors clean while optimizing water consumption from the tank. The device perfectly copes with most situations from everyday life - including cleaning up mud brought on shoes or small amounts of spilled liquids.

For maximum improvement both the apartment mapping process and the subsequent operation of the robot, the device is equipped with a number of sensors. The heart of the mapping system is a modern LiDAR (Light Detection and Ranging) system, which uses a head rotating at a speed of 6 rotations per second with a laser and a reflected light sensor. This system allows you to measure the distance of the robot from 2016 different points in the room in a second, thanks to which navigation in rooms and maps of individual zones of the apartment are extremely accurate. The above-mentioned system is complemented by a set of distance sensors placed on the front and sides of the robot and additional sensors placed on the bottom to protect the device against hitting the ground too high and falling from a height. In addition, the front part of the robot is equipped with a contact bumper, thanks to which even if a small obstacle escapes the sensors, there is no risk of damage to the device as a result of a collision.

The robot is operated fully using the IMOU Life mobile application for devices with Android and iOS systems. Using the application, it is possible to precisely and in detail manage zones (and the intensity and frequency of cleaning for each zone), schedule and task queuing.

Automatic charging:	✓
Automatically resume cleaning after charging:	✓
Automatic container emptying:	✓
Floor mopping function:	✓
Suction power:	4500 Pa
Dust container capacity:	300 ml
Water tank capacity:	250 ml
Maximum obstacle height:	2 cm
Virtual wall / "no-go" zones:	✓ / ✓

User Manual

Code: RV-L11S-A
ROBOT VACUUM CLEANER WITH A MOP **RV-L11S-A** IMOU

Cliff sensor:	✓
Parameters adjustment:	✓
Noise level during operation:	65 dB
Schedule:	✓
Battery capacity:	6400 mAh
Backup time:	2.5 h
Main features:	<ul style="list-style-type: none">• Carpet Boost - increasing the suction power when moving over carpets and floor coverings,• LiDAR System - an advanced, precise navigation system that uses the reflection of a light beam to detect the distance from objects and their shape - Sampling rate : 2016 sample points per second, Detector range : 8 m,• Precise setting of no-go zones and restricted zones (e.g. cleaning without a mop)• Ability to set different cleaning parameters for each room / zone• An extensive, precise work schedule• Smart planning of the most efficient cleaning route based on the map of the room• Possibility to give an immediate command to clean a given place and direct remote control of the robot
Dimensions:	<ul style="list-style-type: none">• Cleaning robot : Ø 350 x 100 mm• Base Station : 356 x 250 x 193
Weight:	<ul style="list-style-type: none">• Cleaning robot : 3.7 kg• Base Station : 3.9
Operation temp. / Relative humidity:	0 ... 40 °C / max. 90 % Cleaning robot
Manufacturer / Brand:	IMOU
Guarantee:	2 years
